## Education

Anatomy Masters Surgical Anatomy Cadaver Workshop, Larkin Health Sciences Institute, 2014  
Postdoctoral Fellow, Neuroscience, University of Pennsylvania, 2006-2010  
Ph.D., Neuroscience, Tulane University, 2006  
B.A., Psychology, University of Maryland Baltimore County, 1997

## Faculty Positions Held

2016 – present      Assistant Professor  
College of Psychology, Department of Psychology and Neuroscience,  
Nova Southeastern University, Ft. Lauderdale, FL.

2010 – 2016      Assistant Professor  
Halmos College of Natural Sciences and Oceanography, Department of  
Biology, Nova Southeastern University, Ft. Lauderdale, FL.

## Research Experience

08/10-present Assistant Professor: Nova Southeastern University.  
Research: (1) Neurogenesis in adult fish brain as an early indicator of pollution-induced neurotoxicity, (2) The effects of selective agonism of angiotensin II AT1 and AT2 receptors on neuronal differentiation and proliferation in human derived neural stem cells, and (3) Examining re-purposed FDA-approved drugs in an *in vitro* model of Alzheimer's disease.

05/08-07/10      Postdoctoral Fellow: Department of Neuroscience.  
University of Pennsylvania. Advisor: Dr. Matthew B. Dalva.  
Research: Investigated the role of the tyrosine kinase receptor, EphB2, on proliferation and migration in endogenous neural progenitor cells.

04/06-04/08      Postdoctoral Fellow: Department of Neuroscience.  
University of Pennsylvania. Advisor: Dr. Philip G. Haydon.  
Research: Investigated the role of IP<sub>3</sub> signaling on the proliferation and differentiation of neural progenitor cells *in vitro* and *in vivo*.

08/00-04/06      Graduate Student: Neuroscience Program, Center for Gene Therapy.  
Tulane University. Advisor: Dr. Darwin J. Prockop.  
Research: (1) Examined neurotrophic factor secretion from mesenchymal stem cells *in vitro* and following implantation into the hippocampus of mice, (2)

Examined the interaction between implanted mesenchymal stem cells and endogenous neural stem cells in the hippocampus of mice, and (3) Isolated and characterized a novel p75NTR expressing stem cell *in vitro* and following implantation into the hippocampus of mice. (4) Examined erythropoietin expression during hypoxia in hippocampal slices.

08/98-06/00 Graduate Student: Department of Psychology.  
Florida Atlantic University. Advisor: Dr. David L. Wolgin.  
Research: Examined the role of instrumental learning in tolerance to cathinone hypophagia.

03/97-08/98 Research Assistant: Gerontology Research Center, Lab of Cellular and Molecular Biology, Molecular Physiology and Genetics Section.  
N.I.A., N.I.H. Advisor: Dr. Donald K. Ingram.  
Research: (1) Examined dopamine-induced DNA damage and apoptosis on striatal neurons, (2) Examined the involvement of dopamine D2 receptor in complex maze learning and acetylcholine release in ventral hippocampus, and (3) Examined age related sensitivity to increased brain and plasma TNF-alpha levels.

### Teaching Experience

08/10-present Assistant Professor: Nova Southeastern University.  
Methods in Behavioral Neuroscience/Lab (NEUR 2700)  
Neurobiology (BIOL 4200)  
Anatomy and Physiology I/Lab (BIOL 3320)  
Anatomy and Physiology II/Lab (BIOL 3330)  
Cell and Molecular Biology (BIOL 4340)  
Directed Independent Study (BIOL 4990 and NEUR 4990)

01/09-04/09 Visiting Scholar: Department of Biology, Lincoln University.  
Molecular Basis of Human Disease (Bio 495). Course Description: The course was designed to (1) highlight the impact of basic science on medicine, and (2) introduce students to several biomedical disciplines as they relate to the origin, pathology, and treatment of human disease.

09/08-05/09 Visiting Scholar: Department of Biology, Rutgers-Camden, The State University of New Jersey.  
(1) General Biology (BIO 101). Course Description: The course was designed to introduce students to biological topics in: The cell, animal diversity, and animal form and function.  
(2) Molecular Basis of Human Disease (BIO 496/596). Course Description: The course was designed to (1) highlight the impact of basic science on medicine, and (2) introduce students to several biomedical disciplines as they relate to the origin, pathology, and treatment of human disease.

01/08-04/08 Visiting Assistant Professor: Department of Biology, Haverford College.  
Laboratory in Biochemistry and Molecular Biology (BIOLH300/CHEMH300).

Western blotting, and microscopy to examine concomitant changes in neurogenesis and learning and memory. Preliminary data demonstrate the first evidence of neurogenesis in the octopus.

N.S.U.'s President's Faculty and Research Development Grant 07/01/13-06/30/14  
\$10,000.

PFRDG: The goal of this proposal was to examine factors that regulate neurogenesis in the adult Mayan Cichlid brain. Several strategies were used to examine the proliferation, migration, integration and cell death of neural stem/progenitor cells including EdU incorporation assays, immunofluorescence, TUNEL assays, Western blotting, and microscopy to identify the vascular niche and migratory routes of neural stem/progenitor cells. Preliminary data demonstrate neural progenitor cells migrate along blood vessels prior to undergoing maturation.

Beta Beta Beta Research Foundation Award 10/20/12-10/20/13  
\$750.

Beta Beta Beta Biological Society Research Foundation Award: The goal of this proposal was to establish a model of neurogenesis using the adult Mayan Cichlid fish brain. Several strategies were used to examine the birth, migration, maturation, and cell death of new brain cells including EdU incorporation assays, immunofluorescence, and microscopy. Results demonstrated neurogenesis occurs in multiple brain regions. Ongoing studies are quantifying the cell-cycle kinetics and rates of migration, integration, cell-type specific maturation, and cell death across the various neurogenic regions.

Farquhar College of Arts and Sciences Dean's Mini-Grant 10/10/12-10/09/13  
\$1,500.

Dean's Mini-Grant: The goal of this proposal was to examine neurogenesis in the adult Mayan Cichlid brain. Several strategies were used to examine the proliferation, migration, integration and cell death of neural stem/progenitor cells including EdU incorporation assays, immunofluorescence, TUNEL assays, Western blotting, and microscopy to identify the vascular niche and migratory routes of neural stem/progenitor cells. Preliminary data demonstrate multiple neurogenic nuclei in the adult brain.

Alavi-Dabiri Postdoctoral Fellowship Award 07/01/09-06/30/10  
\$6,500.

Abass Alavi Endowed Postdoctoral Fellowship: The goal of this proposal was to test the hypothesis that disrupting EphB2/ephrin-B signaling alters migration of adult neural progenitor cells. Several strategies were used to examine the role of EphB2/ephrin-B signaling on the migration of neural progenitor cells including shRNA-mediated knockdown of EphB2, EphB2 knockout mice, Cre/lox-mediated knockout of ephrin-B1, and shRNA-mediated knockdown of ephrin-B2. Immunofluorescence, Western blotting, and BrdU incorporation assays were used to assess the effects of disrupted EphB2/ephrin-B expression *in vitro* and *in vivo*. Preliminary data demonstrate a role for EphB/ephrin-B interactions in the directed migration of progenitors and suggest that cell-to-cell interactions between progenitors and ensheathing astrocytes are critical for proper migration.

T-32 NIH/NINDS Postdoctoral Award 05/01/07-04/31/10  
Training Program in Neurodevelopmental Disabilities: The goal of this proposal was to test the hypothesis that IP<sub>3</sub>, a critical second messenger, regulates neural progenitor cell (NPC)

proliferation, differentiation, and survival *in vitro* and *in vivo*, as well as following transplantation into the nervous system. Several strategies were used to examine IP<sub>3</sub>-mediated regulation of NPC fate including membrane-permeant IP<sub>3</sub> analogs, pharmacological inhibition of the IP<sub>3</sub> receptor, and overexpression of IP<sub>3</sub> 5-phosphatase. Immunofluorescence, calcium imaging, and 2-photon *in vivo* imaging were used to assess functional changes *in vitro* and integration *in vivo* following transplantation into the central nervous system. Results demonstrated that (1) attenuation of IP<sub>3</sub> signaling inhibited cell proliferation without inducing cell death, (2) overexpression of IP<sub>3</sub> 5-phosphatase promoted differentiation of NPCs into astrocytes *in vitro* and *in vivo*, (3) NPCs functionally engrafted and expressed neural markers following implantation into the central nervous system of mice.

HHMI Postdoctoral Teaching Fellowship 01/20/08-03/02/08  
Haverford College Teaching Fellowship Award. The goal of this fellowship was to develop and implement a laboratory course in biochemistry and molecular biology using modern experimental approaches in the study of interesting biological questions. To advance the clinical utility of stem cells and our understanding of how immature transplanted cells would develop in the mature brain, I developed a module that focused on examining the ability of mouse post-natal cortical astrocytes to influence the development of cortical neural progenitor cells.

Louisiana Board of Regents Fellowship 08/00-06/04  
Regents predoctoral scholarship.

### **Awards and Honors**

Travel Award, American Junior Academy of Science and AAAS meeting, 2015.  
DoD Equipment Grant, 2014.  
President's Faculty Research and Development Grant, 2014.  
President's Faculty Research and Development Grant, 2013.  
Farquhar College of Arts and Sciences Faculty Mini-Grant Award, 2013.  
Beta Beta Beta Biological Society Research Foundation Award, 2012.  
Farquhar College of Arts and Sciences Faculty Mini-Grant Award, 2012.  
Interviewed by *Science* magazine for being the first postdoctoral fellow to complete the N.I.H. IRACDA program at the University of Pennsylvania, 2012  
Recognized as a Faculty Mentor at the Leadership Roundtable Scholars Reception, N.S.U., 2011.  
Alavi-Dabiri Postdoctoral Fellowship Award, 2009  
Selected for Building Future Faculty Program at North Carolina State University, 2009.  
Penn-PORT Teaching and Research Fellowship, Univ. of Pennsylvania Institutional Research and Academic Career Development Award, 2008.  
HHMI Postdoctoral Teaching Fellowship, Haverford College, 2008.  
Training Program in Neurodevelopmental Disabilities Award, 2007.  
Feature Article for Neuroscience, PNAS, 102(50), 18171-6.  
Travel Award, International Society for Cellular Therapy, 2005.  
Gene Therapy Research Award, 2005.  
Louisiana Board of Regents Fellowship, 2000-2004.  
Travel Award, American Society for Neural Transplantation and Repair, 2003.  
Honorary Membership, American Society for Neural Transplantation and Repair, 2003.  
Predoctoral N.I.H. Intramural Research Award, 1997-98.

## **Committee Service**

Behavioral Neuroscience Training Program Committee, 2015-current  
TEDxNSU Organizing Committee, 2012-current  
Human Anatomy and Physiology Society Southern Regional Conference Committee, 2016  
Biology Faculty Search Committee, 2012, 2013, and 2015  
Biology Curriculum Committee, 2010-current  
Brain Awareness Committee, 2010-current

## **Memberships**

Psi Chi National Honor Society, 1998-current.  
Society for Neuroscience, 1999-current.  
Beta Beta Beta Biological Honors Society, 2012-current.  
American Society for Neural Transplantation and Repair, 2003-2010.  
Society for Developmental Biology, 2008-2010.

## **Skills and Techniques**

Laboratory: Isolation and purification of mesenchymal stem cells, neural stem cells, astrocytes, and neurons, cell culture, calcium imaging, siRNA/shRNA transfection/transduction, EdU and BrdU incorporation assays, stereotaxic surgery, cannulation techniques (intracranial, intraoral), perfusions, cryostat and microtome sectioning, histology, confocal microscopy, 2-photon microscopy, RNA/DNA/Protein isolation, PCR, RT-PCR, real-time RT-PCR, Western blotting, ELISAs, and TUNEL assays.

Computer: Microsoft Word, Excel, Powerpoint, Adobe Photoshop, ImageJ and MetaMorph.

Languages: English and moderate Spanish (spoken fair, comprehension excellent).

## **Peer Reviewer**

Frontiers in Neuroscience  
Neurochemistry International

## **Invited Presentations**

- |       |  |
|-------|--|
| 10/16 | Keynote speaker: "The history and promise of neuroscience." Human Anatomy and Physiology Society Regional Meeting.   |
| 2/15  | "Current topics in neural stem cell research." Miami Dade College STEMversations Series.   |
| 2/14  | "The effects of selective agonism of angiotensin II AT1 and AT2 receptors on neuronal differentiation and proliferation in human derived neural stem cells." Florida International University. |

- 10/13 "Neurogenesis in the adult brain of the Mayan Cichlid and Octopus Vulgaris," Chemistry Club Science Week, Nova Southeastern University, Ft. Lauderdale, FL.
